OBJECTIVE

Computer science enthusiast skilled in Java and SQL, with hands-on experience in web development. Adept at building responsive and visually appealing websites using JavaScript, Bootstrap, HTML, and CSS. Looking to contribute to a forward-thinking company while honing my development skills.

PROJECTS

- **Project: Spotify Clone Page** (Link)

  Developed a fully interactive playlist page similar to Spotify's web version, featuring dynamic song selection, play/pause functionality, progress bar updates, and real-time audio control using JavaScript.
  - Utilized DOM manipulation to dynamically update the playlist, song details (title, album art, duration), and play/pause states.
  - Implemented multiple audio controls allowing for separate song playback.
  - Integrated real-time updates of song duration, title, and album art during playback.
  - Created a responsive design that adjusts to different screen sizes and devices.
  - Custom-styled progress bars and buttons to resemble Spotify's player interface.
- **Project: Little Lemon Website** (Link)

  Technologies Used: HTML, CSS
  - Utilized CSS Grid and Flexbox for creating flexible and efficient layouts.
  - Ensured responsiveness across various devices and screen sizes.
  - Employed semantic HTML5 elements for enhanced accessibility and SEO.
- **Online FoodShop Responsive Website**(Link)

  Technologies Used: HTML, CSS
  - Built a responsive Online FoodShop website with a user-friendly interface.
  - Created a responsive design that adjusts to different screen sizes and devices
